Re: Blood component shipping containers

Carter BloodCare is replacing the shipping boxes used to transport blood components. The shipping container size remains unchanged and can be identified by the Medical Cube inscription and Carter BloodCare logo. The styrofoam inserts have been replaced with soft white inserts (see images below).

With your help, we can help contain shipping and delivery costs by reusing and not discarding the boxes and/or inserts. Boxes will be retrieved frequently to limit use of your work space.

Please alert your staff to the change in order to prevent delivery delays.
