Re: RFID Pilot Project

Overview:

Carter BloodCare is evaluating the use of radio-frequency identification (RFID) for tracking and traceability of blood products, specifically red blood cells and apheresis platelets. We are working with a healthcare partner for a trial period to test the performance of RFID technology and its role within the blood center.

Impact to you:

Effective February 8, 2016, red blood cells and apheresis platelets distributed by Carter BloodCare will have the RFID passive tag. Please do not remove the tag.

Questions: Please direct questions to Veronica Moore (vmoores@carterbloodcare.org).
