Re:	Donor Antigen Results – Hospital Input

Carter BloodCare is pleased that many of you are using iWeBB to search for historical antigen type(s) on donor red blood cell units located in your inventory. This helps save staff time and effort when trying to match patient blood needs.

As previously communicated, our goal was to enhance this partnership by expanding the feature to enable you to enter results of antigen testing performed at your facility into iWeBB, thus linking the results of your testing to the donor. Entering results will further increase the percentage of donors with historical results which in turn helps conserve resources for our blood banking community.

This feature will be available mid-October, 2016. We strongly encourage you to use this function for the added benefit to our transfusion community.

CarterBloodCare • Hospital Relations • 2205 Highway 121 • Bedford, Texas 76021 Veronica Moore, Director of Hospital Relations <u>vmoore@carterbloodcare.org</u> 817-412-5328 Judy Thornburg, Hospital Relations Advocate <u>ithornburg@carterbloodcare.org</u> 817-412-5719 Users have both the option of entering or scanning the donor identification number (unit ID) into the system. Dual entry of both the donor identification number (unit ID) and antigen result(s) is required to ensure accuracy.

If unit ID or result(s) do not match, then an error message will display allowing user to re-enter data. Submit is required to SAVE results into system.

As a reminder, a user ID and password provided by Carter BloodCare are required to access the many features of iWeBB, as well as a brief training on the website. Please contact the Hospital Relations department to begin realizing the advantages of using iWeBB.
