Re: eLIS Go Live

Overview:

On July 29, 2020 Carter BloodCare received 510(k) approval of a newly developed transfusion service information system, eLIS, by the U.S. Food and Drug Administration. The system will be used by the Immunohematology Reference laboratory as of October 1, 2020.

Impact to Clients:

- Please expect a slight increase in turnaround time from 0500 to 0900 on Thursday, October 1st as the new system is implemented.
- There will be a few minor changes in reports requiring an update to two sections of the service manual. Please download and replace section 4.0 forms Reporting Suspected Transfusion Complications and section 12.0 forms Reference and Transfusion (attached.)
