Re: FFP or PF24 Units with Titer Results

Carter BloodCare will be releasing units of FFP or PF24 that may include a titer result in the lower right quadrant. These units do **not** qualify as COVID-19 convalescent plasma (CCP) and are labeled to be used as FFP or PF24 as indicated by the product code. Products that do not qualify for COVID-19 CCP, but have been antibody titer tested, may include a titer result on the product label. This titer result does **not** qualify the unit as a COVID-19 CCP unit and should not be used to treat COVID-19 patients in place of COVID-19 CCP units. Release of these units should help rebuild the group A plasma supply. Examples are included below for your reference.
