Re: Discontinuation of Thawed Pooled Single Units of Cryoprecipitate

Background

Prior to the production of pre-pooled cryoprecipitate, Carter BloodCare offered the following service:

- Thawed and pooled 2-10 units of single cryoprecipitate for transfusion

Since the inception of pre-pooled cryoprecipitate, Carter BloodCare has not received a request for this type of service. As a result, Carter BloodCare will discontinue thawing and pooling 2-10 single units of cryoprecipitate.

This change does not affect providing thawed pre-pooled (five) units of cryoprecipitate.

Impact to Clients

- Effective November 14, 2023, Carter BloodCare will no longer offer thawed pooled single units of cryoprecipitate.
- Single units of frozen cryoprecipitate will continue to be orderable.
- Thawed pre-pooled (five) units of cryoprecipitate will continue to be orderable.

Questions and Additional Information:
